

Coding Test - Interns

Coding Test

Write a simple command line application that does the following:

1. Ask the user to enter a number
2. Read the previous number that was written to disk by the program the previous time it ran
3. Add the entered number to the previous number. This will give you a total number
4. If the total number is greater than 152 then subtract 152 from the total number
5. Display the total number to the user
6. Save the total number to disk
7. Exit

Use any modern programming language (e.g., Python, Rust, C#, Kotlin, C/C++ - submissions in FORTRAN will not be accepted) that is most familiar to you and upload your submission to a public git repository of your choosing. We are looking to see what you consider to be your best work.
